

Arjun Soundarajan

📍 Bengaluru, India | ✉ soundarajan.arjun@gmail.com | ☎ 9035588951

Professional Summary

Experienced Software Developer with 5+ years of expertise in building secure, scalable, and high-performance enterprise and system-level applications. Skilled in Windows application development (C#, C++, .NET), Web Applications, and security-focused architectures. Proven track record of leading teams, mentoring and delivering solutions with emphasis on performance, scalability, and code quality. Passionate about low-level systems programming, Windows internals, and agent/service-based architectures.

Core Skills

- **Programming & Systems:** C++, C#, .NET Core/Framework, WebAPI, Multithreading, React, Python, Django, HTML5, CSS3, PHP, VB, Java Script, TypeScript,
- **Security & Best Practices:** Secure Coding, Authentication & Authorization (JWT, LDAP), Encryption, Certificate Management, Wireguard, OpenVPN
- **Architecture & Development:** Microservices, Docker, REST API, Cloud (AWS), Performance Optimization, Git, Azure Repos, GitHub, CI/CD Pipelines, MQTT, virtual environments (VMware, Oracle VM, Azure), Gherkin,
- **Collaboration & Leadership:** Technical Mentorship, Code Reviews, Agile/Scrum, Cross-functional Collaboration
- **Databases:** MS SQL Server, PostgreSQL, MySQL, Stored Procedures,
- **Skills:** Postman for API testing, Debugging & Troubleshooting, Quick learner, Critical Thinking, Reverse Engineering, Bootstrap, Material Design, IoT, Embedded devices,

Work Experience

Senior Software Developer – Simplify3x Software Pvt Ltd

Bengaluru, Karnataka | 10/2023 – Present

Project: Government E-Stamp Duty System – Malaysian Inland Revenue Board (LHDN)

Role: Full-Stack Software Engineer

Summary:

Developed and maintained a government-grade electronic stamp duty platform handling legal document stamping, duty calculation, and certificate management for Malaysia's tax authority. Worked on a multi-form suite covering property transfers, loans, leases, and other instruments using ASP.NET Core 8 MVC backend and jQuery/JavaScript frontend. Implemented and fixed features across client-side form validation, PDF generation, step-based form flows, and integration with government backend systems (HITS, DMS). Fixed critical bugs, PDF rendering from dashboard flows. Contributed to Razor views, MVC

controllers, validation scripts, and stamping service layers supporting end-to-end duty submission workflows.

Key Technologies: C# (.NET Core 8), ASP.NET MVC, JavaScript/jQuery, Oracle DB, EF Core, Razor Views, Git

Project: Healthcare Management System - Enterprise healthcare therapy & billing platform

Role: Full-Stack Software Engineer

Summary:

Developed and maintained financial management and patient care modules within an enterprise healthcare system serving therapy and rehabilitation facilities. Worked on multi-product suite including Financials, Billing and Customer Portal modules using .NET/C# backend services and TypeScript frontend applications. Implemented features for claims processing, payment tracking, PDPM (Patient-Driven Payment Model) reporting, batch management, and invoice generation. Fixed critical bugs in transaction handling, DevExpress UI controls, and database stored procedures. Contributed to SQL Server reports, API controllers, and data access layers supporting clinical documentation and financial workflows.

Key Technologies: C# (.NET Framework), TypeScript, SQL Server, ASP.NET Web API, DevExpress, Git

Project: Secure VPN Communication Platform

Role: Full-Stack Software Engineer

Summary:

Architected and developed an enterprise-grade VPN solution built on WireGuard, featuring a .NET-based backend controller, JWE-encrypted license management, and a React/Node.js/PostgreSQL admin dashboard for centralized control. Delivered cross-platform clients for Linux, Windows, macOS, iOS and android, with real-time WebSocket communication supporting 10,000+ concurrent connections. Implemented CI/CD pipelines with Docker and deployed a fully integrated secure networking infrastructure with authentication, usage analytics, and SSL/TLS encryption across all the platforms.

Key Technologies: C# (.NET Framework), Node.js, React, PostgreSQL, Docker, LDAP, WireGuard, JWE, Python, Shell Scripts, Bash, AWS EC2, Let's Encrypt.

Project: Payment Service - Microservices-based Payment Processing Platform

Role: Software Engineer

Summary:

Developed and maintained a microservices-based payment processing system for healthcare applications using .NET and Clean Architecture principles. Built RESTful APIs for processing ACH transactions, card payments (card-present and card-not-present), tokenization, refunds, and payment plan management. Implemented Azure Service Bus message consumers for asynchronous payment processing, installment handling, and event-driven messaging. Integrated payment gateway credentials encryption/decryption and deployed services using Azure Service Fabric with health monitoring. Worked on PostgreSQL Entity Framework Core data access layer and implemented unit tests for service reliability. Resolved bugs, message queue consumption, and refund/void transaction publishing.

Key Technologies: .NET C#, ASP.NET Core Web API, Azure Service Bus, PostgreSQL, Entity Framework Core, Docker, Swagger, Hangfire.

Project: DDL Service - Smart Device Configuration Management System

Role: Full-Stack Software Engineer

Summary:

Developed a web application for managing DDL (Digital Display Label) for healthcare domain, update orders and configuration requests for smart medical devices using Clean Architecture. Built RESTful APIs with ASP.NET Core and versioned endpoints for managing update orders, update requests, reference documents, and update order sessions. Implemented Blazor WebAssembly frontend using MudBlazor component library with OAuth2 Connect authentication. Developed PostgreSQL database layer with Entity Framework Core and AWS S3 integration for object storage. Created background job processing infrastructure and smart device configurator client libraries. Implemented comprehensive testing strategy including unit tests and end-to-end tests. Containerized application using Docker with multi-stage builds and deployed with docker-compose.

Key Technologies: .NET 8, C#, ASP.NET Core Web API, Blazor WebAssembly, MudBlazor, PostgreSQL, Entity Framework Core, AWS S3, OAuth2, Docker, Serilog, Swagger

Software Programmer – Christ Infotech (Christ University R&D)

Lavasa, Pune | 01/2023 – 10/2023

- Developed Windows and web applications for government and healthcare projects using C#, .NET, and React.
- Implemented security and scalability improvements across applications to ensure compliance with enterprise standards.
- Collaborated with distributed teams and participated in full SDLC with emphasis on Agile and quality practices.

Project Assistant – CSIR-National Aerospace Laboratories (NAL)

Bengaluru | 06/2020 – 01/2023

- Developed low-level data acquisition systems for aerospace sensor integration using LabVIEW, C++, and Python.
- Implemented real-time data analysis and processing pipelines for structural testing.
- Collaborated with scientists and engineers to design scalable, reliable data collection frameworks.

Computer Tech. Trainee – Visvesvaraya Industrial Technological Museum

Bengaluru | 10/2017 – 01/2020

- Built in-house Windows applications for museum management and satellite units.
- Gained early experience in Windows Forms, system-level integrations, and debugging.

Personal Projects

- Windows Forms Invoice Software (C#/.NET) – Designed a desktop invoicing system with dynamic PDF generation, reporting, and database integration.
- Online Banana Bidding Platform (Govt. of Tamil Nadu) – Real-time auction system enabling secure farmer-to-trader transactions.

Education

M.Sc. Computer Science & Applications – Christ University, Bengaluru (2020 – 2022)

B.C.A. – Surana College, Bengaluru (2014 – 2017)
